Daniel Wiegand

# Carbon Footprint Report 2018

## Management Summary

**Project Target:** The project target was to calculate a Corporate Carbon Footprint of Optima Pharmazeutische GmbH (“Optima”). Covered are direct emissions from own facilities, own vehicles and purchased energy, as well as indirect emissions along the value chain. Due to the preliminary internal work by Optima, it was possible to speed up the process of data gathering and calculation. This has been supported by the holistic DFGE TopDown approach, based on DFGE’s project experiences and combined with mathematical methods.

**Optima - Carbon Footprint 2018:** The Carbon Footprint for Optima was assessed via a complete analysis considering the selected inventory boundaries. The calculation is based on the methodology of the Greenhouse Gas Protocol (GHG Protocol)<sup>1</sup> and covers all relevant Scope 1, 2 and 3 emissions.

The estimated total Carbon Footprint amounts to **491 t CO<sub>2</sub>e** (calendar year 2017).

Scope	Value	Unit
Scope 1 total	12	t CO <sub>2</sub> e
Scope 2 total	14	t CO <sub>2</sub> e
Scope 3 total	465	t CO <sub>2</sub> e
<b>Total CF</b>	<b>491</b>	<b>t CO<sub>2</sub>e</b>

**Optima – carbon intensity.** Based on the data provided by Optima for in the year 2017, the following emission intensity metrics have been calculated:

<sup>1</sup> Standards available at <http://www.ghgprotocol.org/standards/> (Nov 17)

Intensity metric	Value	Unit
Emissions per unit sold	0,105	t CO2e/million EUR
Emissions per FTE	35,04	t CO2e/FTE
Emissions per floor area	0,62	t CO2e/m <sup>2</sup>

**Data quality rating:** The quality of used input data is rated by DFGE experts based on qualitative indicators defined by the GHG protocol. For the different balance groups, an error analysis is performed, including an estimation of the bandwidth in which the actual value is located. Results are then aggregated using mathematical methods.

The resulting data quality rating for the overall result is **“Fair”**, corresponding to a bandwidth of **+/- 15-30%**

All greenhouse gas emission amounts are calculated in CO<sub>2</sub>-equivalents (CO<sub>2</sub>e). All results are based on the information provided by Optima and should be considered preliminary. DFGE recommends conducting further investigation to improve data quality.

The methodological background, detailed values for all categories, used data sources and a detailed data quality assessment are presented in the detailed Carbon Footprint report.

Founded in 1999 as a spin-off of the technical University of Munich, the DFGE – Institute for Energy, Ecology and Economy provides consulting services in the field of sustainability. Our offer Sustainability Intelligence featuring calculation, management and reporting solutions aims at bundling the effort of taking part in several sustainability/CSR standards and rankings like CDP, UNGC, EcoVadis or GRI. Our services are structured according to our ACCoRD scheme: Analyze, Collect, Compose, Review, and Document, to foster continuous improvement and collect reliable data. Our clients range from international companies (DAX and fortune 500) to SMEs. Our partners are key players in the domain (such as CDP and EcoVadis), and we constantly monitor the current trends and existing norms, to support the organizations with dedicated solutions.
